

Modernize your hybrid infrastructure

Unisys Hybrid Cloud Managed Services

Highlights

Proactive service management to streamline IT service delivery and support and ensure greater uptime and reliability

AI-enabled operations powered by Unisys Intelligence Accelerator

Site reliability engineering model

Ongoing accountability for performance, resilience, and optimization across hybrid environments

Built-in security and compliance controls

Best-of-breed partnerships for leading technologies and frameworks

Organizations are modernizing IT infrastructure to meet digital transformation goals and support business agility as market demands evolve.

Unisys Hybrid Cloud Managed Services help you modernize IT operations across private, public, hybrid, and multi-cloud environments, including data centers, combining advanced technology and delivery models to automate operations while maintaining performance, resilience, and control.

Our services support infrastructure modernization, IT operations management, service delivery, cost management, and risk and compliance. These capabilities are enhanced by Unisys Intelligence Accelerator, an AI-enabled platform embedded across Unisys cloud, applications, data, and cybersecurity solutions, providing AI-driven operations, automation, and governance to help improve resilience and operational control. Tailored to your IT landscape, our services support a consistent, frictionless transition to your future operating model.

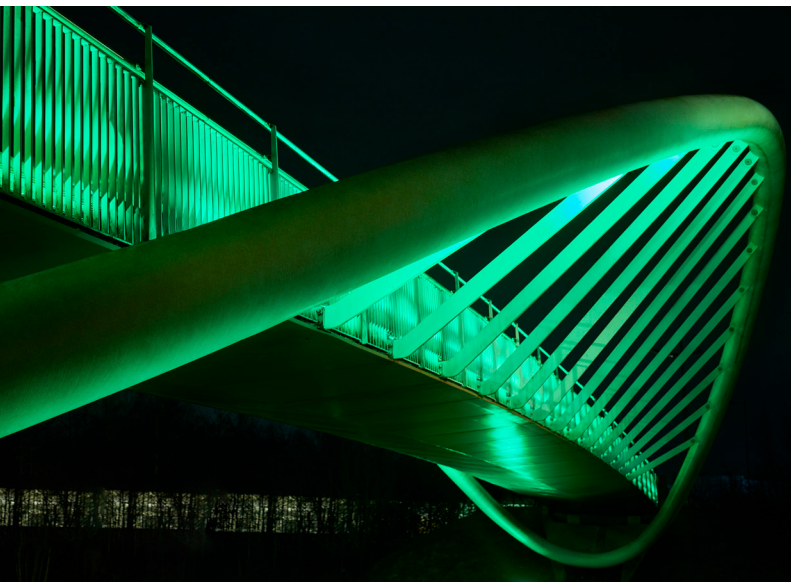

Inform decision-making

Benefit from 24/7 expert support, AI, and automation for reliable services, service-level agreement adherence, and outcomes.

How you benefit

- **Optimized costs:** Control costs by gaining visibility into hidden and underestimated expenses often missed by legacy tools. Forecasts help prevent budget overruns and guide informed resource use and long-term value. Our services support cost optimization through automated management, informed architecting, and FinOps-driven planning.
- **Greater visibility:** Gain deep insights and predictive analytics across your hybrid infrastructure through AI-enabled observability and automation, helping improve operational control and decision-making.
- **Enhanced performance:** Gain the agility to adapt to changing infrastructure technologies and business environments and apply new capabilities. Our services also boost performance through dynamic workload balancing, rapid provisioning, and cloud scaling while continuously improving resilience and operational efficiency.
- **Reduced risk:** Address security gaps with automated incident detection and resolution and stay compliant with real-time monitoring for regulatory standards. Our built-in controls support regulated industries like government and financial services.
- **Accelerated innovation:** Deploy applications and respond to market changes faster through automation and streamlined provisioning.

Why Unisys?

Unisys brings decades of experience managing complex, regulated, and diverse hybrid infrastructure, backed by deep security expertise and solutions tailored to your cloud and industry needs. Unlike providers focused primarily on migration, Unisys stays accountable for the ongoing performance, resilience, and reliability of your mission-critical on-premises and cloud environments.

Our proprietary frameworks and accelerators streamline hybrid cloud operations through infrastructure-as-code service catalogs for consistent provisioning. DevSecOps models support secure automation, while FinOps architectures use predictive analytics to manage costs. Unisys Intelligence Accelerator combines AI-driven operations, observability, automation, and self-healing workflows to catch issues early, reduce manual effort, improve uptime, and increase visibility.

In highly regulated environments, we prioritize security and compliance while helping clients maintain governance and oversight across hybrid systems. We partner with industry leaders, including Azure, AWS, Google Cloud, and Oracle Cloud, to strengthen operational reliability and support a competitive advantage.

Encourage continuous innovation

Build on an established feedback loop to continuously improve infrastructure and cloud investments, freeing IT teams for strategic work over routine tasks.
